April - June 2023

v1

Planetarium Stuttgart

Willy-Brandt-Straße 25
70173 Stuttgart
Phone: 0711 21689015 (Mo-Fr 8:00 - 12:00 + 14:00 - 16:00)

info@planetarium-stuttgart.de
www.planetarium-stuttgart.de

Director: Dr. Uwe Lemmer

Entrance fees

Adults		
morning	10:00 - 12:00	5 EUR
afternoon + evening	12:00 - 21:00	8 EUR
(School)Kids, Students, Handicapped people		5 EUR
Accompanying persons of people from 80% handicap		free
Tunesday		5 EUR
Music- and Lasershows (no discounts)		8 EUR

- You can pay with „Family Card /Familienkarte“
- The whole building is barrier-free, no steps or ramps
- There are wheelchair places available in the stardome
- We support induction-based hearing aids, ask at counter

Opening hours

Ticket counter opens 1 hour before Showstart.

All of our shows in the stardome are simulcast in English.
In order to enjoy the English version you need to pick up

Our Audioguide System:

At our ticket counter we will provide you with a ready-to-go system consisting of a receiver-box and premium Sennheiser headphones. All we ask for is a deposit of 20 EUR, which will be refunded once the devices are returned to the operator in the dome.

ASTRONOMY FOR EVERYONE

SUMMER STARS ABOVE STUTTGART
(SOMMERSTERNE ÜBER STUTTGART)

SUITABLE FOR AGES 8 AND UP

With its warm nights, summer offers a good Opportunity to “walk in the heavens”. In this Demonstration we use the star projector and you receive Tips for orientation in the summer starry sky.
Travel with us along the typical constellations for this time of year. We‘ll take a look at the North Star, Hercules, across the Summer Triangle to winged horse Pegasus. Leaving the bright environment of the big city, we can spot the shimmering band of light from the Milky Way.

We also use the possibilities of the planetarium and carry out a virtual journey to the southern hemisphere of the earth.
Our destination is New Zealand and many unfamiliar constellations.

360° Fulldome Video | Star-projector

Duration: about 1 hour
Please find the showtimes in the calendar starting on page 15.

ASTRONOMY FOR EVERYONE

SPRING STARS ABOVE STUTTGART
(FRÜHLINGSSTERNE ÜBER STUTTGART)

SUITABLE FOR AGES 8 AND UP

In Spring the nights grow shorter, but the mild climate invites us to peak upwards to the stars.
Experience what can be seen in the spring above Stuttgart and how to orient yourself in the tangles of the night sky.

The most important constellations and celestial objects are explained. This presentation is an ideal companion to a visit to an observatory.

Our analog starprojector gets a real workout showing stars and planets. We also travel to shores far away and visit the southern hemisphere to take a look at the sky there.

360° Fulldome Video | Star-projector

Duration: about 1 hour
Please find the showtimes in the calendar starting on page 15.

ASTRONOMY FOR EVERYONE

EXPLORE! INTO SPACE WITH KEPLER
(EXPLORE! MIT KEPLER INS ALL)

SUITABLE FOR AGES 10 AND UP

Looking at the history of astronomy from the beginnings in ancient Babylon to the current space age, a few people stand out in particular.
One of these great minds was Johannes Kepler, who was born near Stuttgart.
This planetarium presentation shows in a visually stunning and impressive way how Kepler‘s findings are used in modern space flight for the flight through the solar system.

To achieve this, we will climb aboard a virtual spaceship that takes us to a planet whose orbit was of special research interest to Kepler.

In this version (extended by the planetarium Stuttgart) of the internationally acclaimed and award-winning fulldome presentation “Explore!”, you will also experience a realistic starry sky and learn a lot about the universal genius from Weil der Stadt.

360° Fulldome Video Star-projector

Duration: about 50 minutes

Please find the showtimes in the calendar starting on page 15.

THE ADVENTURE OF HUMAN SPACEFLIGHT

DESTINATION MARS
(AUFBRUCH ZUM MARS)

SUITABLE FOR AGES 8 AND UP

For the longest time,humans setting foot on Mars was considered fiction, nowadays the realization that dream shifts ever closer to reality.
Space engineering and development has sped up significantly and the flight of an astronaut crew to the red planet is getting closer and closer.

Both NASA and the private company SpaceX are developing their own rockets that will transport people and material to Mars in the foreseeable future.
Not all problems are solved. But half a century after the moon landings we have developed skills, knowledge and the essentials technologies to prepare astronauts for the next step into space.

In this presentation, we will get to know the near-Earth desert planet and skip forward about 15 years into the future to take part in a landing on Mars.

360° Fulldome Video Star-projector

Duration: about 50 minutes

Please find the showtimes in the calendar starting on page 15.

WITHOUT BEING COLD IN THE SNOW

AURORA - LIGHTS OF WONDER
(AURORAS - LICHTER DES NORDENS)

SUITABLE FOR AGES 8 AND UP

Our journey into the world of the Northern Lights begins in Stuttgart. We get to know the stars and constellations of a winter evening sky and afterward we will fly to the North Pole and experience the differences between the two vistas.

A trip to the International Space Station shows us how astronauts are viewing auroras from above on the night side of our Earth. The interplay between solar wind, earth's magnetic field and atmosphere is explained.

Finally we reach northern Canada, where the Korean photographer O Chul Kwon with his cutting edge video technology recorded the magical phenomenon of the northern lights (Aurora borealis). A grandiose dance of shapes and colors awaits us in the sky.

360° Fulldome Video

Star-projector

Duration: about 50 minutes

Please find the showtimes in the calendar starting on page 15.

OUR PLANETARY NEIGHBORHOOD

PLANETS - JOURNEY INTO THE SOLAR SYSTEM
(PLANETEN - EXPEDITION INS SONNENSYSTEM)

SUITABLE FOR AGES 8 AND UP

In this presentation we will use the magic of the planetarium to visit the planets of our solar system. Our first stop is Mars, where we go in search of signs of life.

After that we will visit the explosive landscape of a shattering comet and then peek at the kingdom of the giant planets Jupiter and Saturn. Cloud swirls, volcanic moons and ring systems will unfold before our very eyes.

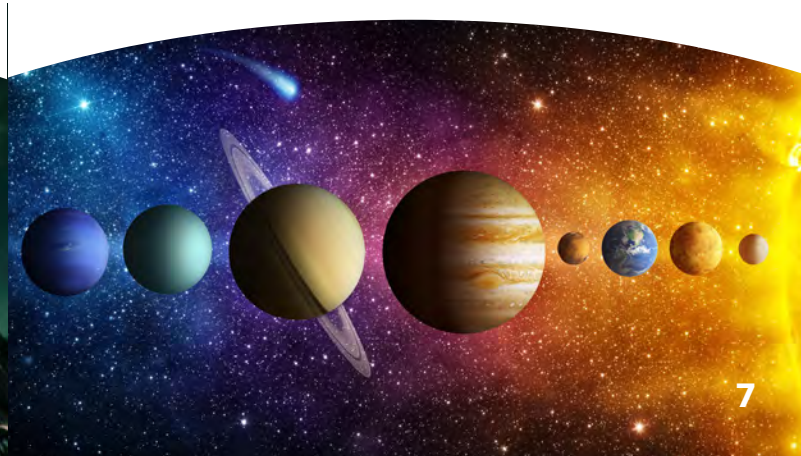
After a detour to the distant dwarf planet Pluto we will reach beyond our solar system and check out a speculative look at the surface of an exoplanet in the depths of space.

Join us on a spectacular tour of the natural wonders in the kingdom of the sun!

360° Fulldome Video

Duration: about 55 minutes

Please find the showtimes in the calendar starting on page 15.



OUR STARRY FUSION REACTOR

SOLAR SUPERSTORMS - EARTH IN DANGER? *(SONNENSTÜRME)*

SUITABLE FOR AGES 10 AND UP

The Sun is the star of our lives.
Without it there would be no life on Earth.
But our tireless source of energy is not without danger - it has a real temper!

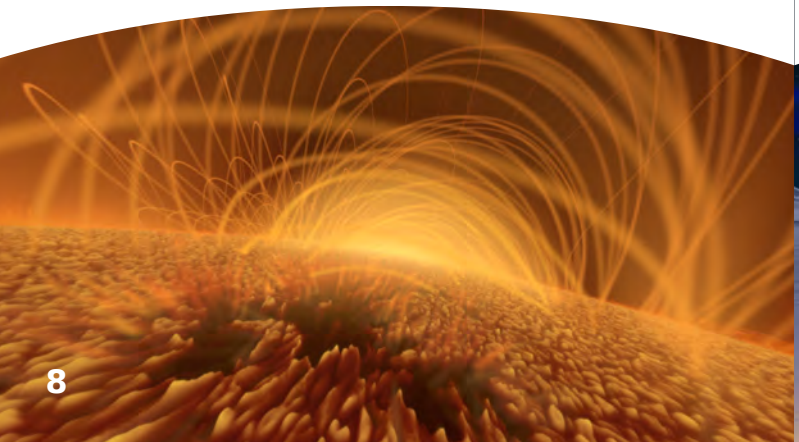
Enormous forces are at work on the solar surface:
We can see eruptions of immense intensity, giant arches of superheated gas and fiery waves which crash and collide high above the churning surface.

Earth is freuquently hit by the might of solar storms.
This has consequences ranging from beautiful lightshows like the polar lights to the collapse of powergrids.

This presentation shows the current state of solar science and the interactions between Sun and Earth.

360° Fulldome Video · Sternen-projektor

Duration: about 50 minutes
Please find the showtimes in the calendar starting on page 15.



FOR KIDS

POLARIS AND THE SECRET OF THE NIGHT *(POLARIS UND DAS GEHEIMNIS DER NACHT)*

SUITABLE FOR AGES 5 AND UP

James is an inquisitive penguin from the South Pole, who travels the earth and meets polar bear Vladimir close to the icy North Pole. Together they look at the stars and wonder about the different polar nights at the South Pole and North Pole.

To solve this mystery, they hijack an abandoned submarine and turn it into a spaceship. Upon exploring Mars and Saturn they realize that other planets also have days, nights and seasons. When they return to earth, they finally find the answer as to why the nights are sometimes long and then so short again.

A loving and entertaining journey of discovery for young and old incorporating our optomechanical star projector!

360° Fulldome Video · Star-projector

Duration: about 45 minutes
Please find the showtimes in the calendar starting on page 15.

FOR KIDS

ACCIDENTAL ASTRONAUTS
(PLÖTZLICH ASTRONAUT)

SUITABLE FOR AGES 5 AND UP

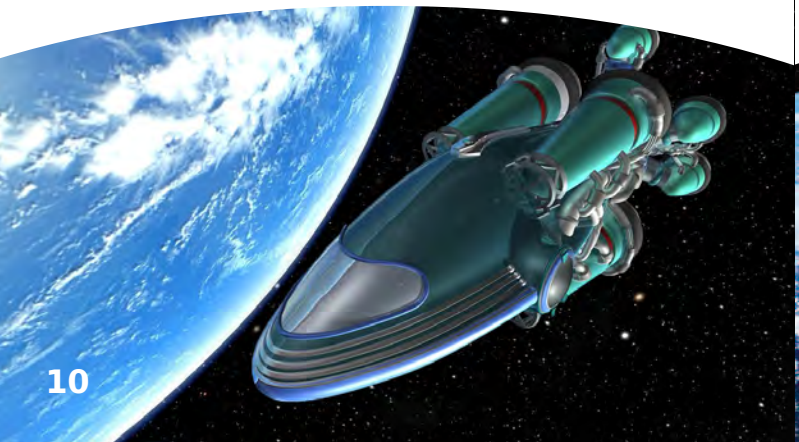
Welcome to the land of the robots!
The clever robot children Annie and Cy visit a science cente including a space museum with their school. But some things don‘t go as planned.

Together with their dog Armstrong they inadvertendly hijack a spaceship, fly to the moon and learn a lot about the solar system and the constellations along the way.

See the extended version of the Stuttgart Planetarium, in which the star projector is also used.

360° Fulldome Video | Star-projector

Duration: about 50 minutes
Please find the showtimes in the calendar starting on page 15.



FOR KIDS

THE BASICS OF OUR STARS AND PLANETS
(DAS KLEINE 1X1 DER STERNE UND PLANETEN)

SUITABLE FOR AGES 4 AND UP

Upon wishing on a shooting star, three children board the Space station OBSERVER and travel through space.

We will encounter a number of planets and get beamed down to the surfaces of Venus and Mars.

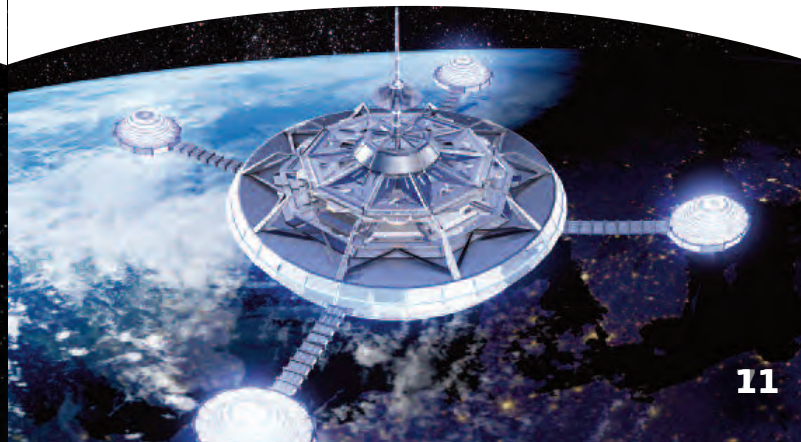
Saturn, with its rings of ice and rock, is also on the flight plan.

Afterward, like Icarus, they fly too close to the sun and are nearly devoured by hot tongues of flame.

After returning to earth, you can take a relaxed look at the magnificent night sky with the help of our star projector. Important stars and known constellations from all Seasons are presented and explained.

360° Fulldome Video | Star-projector

Duration: about 50 minutes
Please find the showtimes in the calendar starting on page 15.



MUSIC SHOW

PINK FLOYD - DARK SIDE OF THE MOON

„Dark Side of the Moon“ is the most successful album by the British rock band Pink Floyd and a legendary milestone of the „Psychedelic and Space Rock“ of the 1970s.
Without it being the intention of bandleader Roger Waters, a number of tracks on the album seem downright made to be shown with our dome projection in the planetarium.

Immerse yourself in audiovisual spaces with the incomparable compositions of Pink Floyd and succumb to the pull into the depths of the cosmos and into the abyss of the human soul. Experience this intense musical journey of „Dark Side of the Moon“ with our powerful sound system in combination with 360° projection, star projector and laser show.

Duration: about 60 minutes
Please find the showtimes in the calendar starting on page 15.

MUSIC SHOW

QUEEN HEAVEN - THE ORIGINAL

The inimitable aura of the band, the creativity of their lyrics, the unique voice of Freddie Mercury and the tremendous power of their concerts - all this is reflected in this furious music show under the planetarium dome.

This is a tribute to the legendary rock band with a plethora of original music, photos and videos. Among the offerings are the greatest anthems in the band‘s history, such as „Bohemian Rhapsody“, „We Will Rock You“ and „Radio Gaga“.

Experience Queen with our powerful sound system in combination with 360° dome projection, our star projector and laser show.

Duration: about 50 minutes
Please find the showtimes in the calendar starting on page 15.
